

Start now!

**Become part of the change with
the PFI - „eco“- label!**

Currently sustainability is a big part of the public discussions and become more and more relevant in everyday work. The international slogan of the agenda 2030 for sustainable development “leave no one behind” fits also for the economy, especially for all companies of the shoe-, leather- and textile industry. **This means, react now, and react right!**

PFI team members will support you on your way to your sustainability goals.

With the PFI - “ECO” certification you can demonstrate that your company is well prepared and on track to more sustainability.

Be safe, choose “ECO”.

TOGETHER – HAND IN HAND

The PFI - “eco” - label is structured in such a way, that you can start with the given requirements. Thus, we want to offer you a convenient access to your sustainability journey. Starting point is the actual state and the measures, that are already implemented in your facilities. PFI auditors will prepare an assessment catalogue to support this process with the following topics:

- Quality management
- Compliance with environmental and social standards
- Supply chain management

In the next step we develop a suitable strategy for you to become more sustainable.

That way we create a customized frame for your corporate specific sustainability concept. The goals that are set will be verified at the latest after three years. It is also possible to extend the “eco”-label on products or materials.
